Exception Notes (cross-referenced to ToE-09 / CAPA-03):

OFF-2273: Termination effective 2025-11-05; HRIS termination event was processed a day late, resulting in the offboarding Jira ticket being created 2025-11-06. GitHub org access was not revoked until 2025-11-08 09:40, approximately 48 hours after the termination effective date. Okta and AWS IAM access were revoked within the 24-hour SLA in this case.

OFF-2301: Termination effective 2025-12-02; ticket created 2025-12-03 due to a delayed HR notification over a weekend. GitHub org access was not revoked until 2025-12-05 10:30. Okta and AWS IAM access were revoked within the 24-hour SLA once the ticket was created.

Both exceptions relate specifically to GitHub organization access removal, which in the current workflow is a manual step performed by IT after the automated Okta/IAM deprovisioning. See CAPA-03 for remediation (automating GitHub deprovisioning within the same Okta Lifecycle Management workflow).
